

Home Heating and Cooling Offering Overview

Heating and cooling can account for nearly half of a home's energy cost. Don't let upfront costs keep you from making your home more comfortable and energy efficient. ComEd instant discounts and incentives make it easier to invest in efficient heating, cooling, and water heating equipment for your home and save on energy costs in the process.

Available products through the ComEd Home Heating and Cooling Offering:

Air Source and Centrally Ducted Mini-Split Heat Pumps

Discounts up to \$2,000

During winter, heat pumps are able to capture heat energy from the cold outdoor air, and transfer it into your home. During the summer, they do the opposite. Heat pumps move heat rather than generate it, allowing them to provide up to four times the energy they consume. Talk to a participating contractor to find out which heat pump is best for your home.

Receive an additional \$75 discount by installing an ENERGY STAR[®] Smart Thermostat

Ductless and Mixed Use Mini-Split Heat Pumps

Discounts up to \$1,000

Mini-split heat pumps are a heating and cooling solution for homes that do not require ductwork. The system uses a compressor pump to circulate refrigerant liquids between two heat exchanger coils (one outside, one inside). Mini-split heat pumps provide zonal control by directly conditioning an area or room, so you have flexibility to heat or cool only the spaces you want. By eliminating the need for ductwork to/from vents, system efficiency increases because heated or cooled air isn't lost through duct leaks. Talk to a participating contractor to find out if a heat pump is best for your home.

Receive an additional \$75 discount by installing an ENERGY STAR[®] Smart Thermostat

Heat Pump Water Heaters

Discounts up to \$750/Unit

Heat pump water heaters move heat rather than generate it, using electricity to transfer warmth from the surrounding air into the water stored in a tank. The energy-efficient system works like a refrigerator in reverse, generating warm water for residential households.

Geothermal (Ground Source) Heat Pump System (including loop)

Discounts up to \$6,000/home

Geothermal systems use the relatively constant temperatures underground to provide efficient, year-round heating, cooling and/or water heating. Also known as ground source or earth-coupled heat pumps, geothermal systems are typically the most cost-effective and environmentally-friendly option available. Geothermal systems must be installed by an ICC and geothermal certified ComEd Energy Efficiency Service Provider (EESP). Pre-approval is required.

Geothermal (Ground Source) Heat Pump System Indoor Replacement

Discounts up to \$1,200/unit

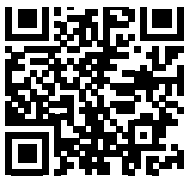

ComEd offers indoor unit replacements of existing heating systems (furnace, heat pump, etc), retrofit of an existing geothermal heat pump unit or replacement of an indoor heat pump unit, when installed by an ICC and geothermal certified EESP. Pre-approval is required.

How to Get Started

To receive your instant discount or incentive at the point of sale, select and purchase qualifying equipment from a ComEd heat pump-trained contractor or an International Code Council (ICC) and geothermal certified EESP. Self-installs do not apply.
