Costs to Comply With Delaware's Renewable Energy Portfolio Standards Act

For the period June 1, 2024 through May 31, 2025

Delmarva Power incurs and recovers costs in compliance with a Delaware law known as the Renewable Energy Portfolio Standards Act ("Act"). Beginning on June 1, 2012, Delmarva Power was required to assume responsibility for meeting the obligations of the Act for customers in its Delaware service territory, including those who purchase their electricity from third party suppliers. Compliance with the Act is achieved using renewable energy sources, such as solar and wind generation, as well as energy output produced by a qualified fuel cell provider project, and through purchasing credits for renewable and clean energy generation.

The Act requires that the electricity portfolio used to supply Delaware customers includes a minimum percentage of renewable energy sources each year. On February 10, 2021, the Act was amended and Delaware's prior renewable energy requirement of 25% by 2025 was increased to a new requirement of 40% (including 10% of which must come from solar generation) by 2035, with exceptions when certain unit costs exceed legislated thresholds.

The following information reflects the total costs recovered, to meet the requirements of the Act for the period June 1, 2024 through May 31, 2025. These costs do not reflect reductions for economic or health benefits from the use of renewable and clean energy sources. The costs collected through the Renewable Compliance Charge for compliance year June 1, 2024 through May 31, 2025 were $77 million.
