Unmatched Installation Experience

Great windows are only great if they're installed properly. It's critical that all the components that go into your new windows work together – insulation, caulking, sealants, and the window itself.

It Starts with Quality Materials

① OSI QUAD Low-Expansion Foam

- Single-component, minimal expansion and low-pressure polyurethane foam specifically designed for replacement window applications
- Ideal foam for sealing gaps, cracks, holes, or voids around windows
- Closed-cell structure of this material provides an R-factor of 5 per inch of cured foam, making it an efficient method for reducing air and moisture infiltration

② OSI® QUAD MAX® Window, Door, and Siding Sealant

- Unique multi-polymer formula specially engineered for premium replacement window installations
- Permanently flexible — will not crack or split even in extreme temperatures
- Water-resistant, all-weather applications, sticks to wet surfaces with no water washout
- Excellent UV resistance — will not crack or yellow

③ High-Performance Trim Coil

- Outperforms PVC and Poly Coil finishes in the ASTM physical tests performance
- Features a finish with 8 mils of paint; that's twice the amount of paint used by most trim coil manufacturers
- Scratch-resistant, stain inhibitors, better UV protection, and harsh-climate coating

④ Concrobium Mold Control Spray

- Innovative, market-leading product that effectively eliminates existing mold, prevents mold re-growth, and eliminates musty odors with no harmful chemicals
- Effectively eliminates and prevents mold with no bleach, ammonia, or VOCs
- Works as it dries by crushing the mold spores at the roots, leaving behind an invisible antimicrobial barrier to prevent future mold growth

AAMA Gold Label

Barrington Windows proudly carry the AAMA Gold Label, which means that they meet stringent performance standards for air and structural load.

AAMA Gold Label Certification

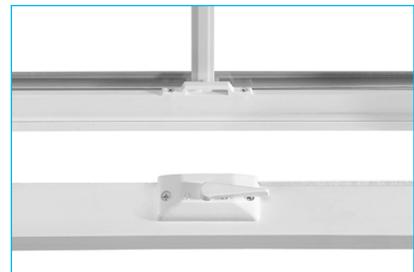

Air:	0.07 cfm at 25 mph*
Structural:	DP 40 153 mph

Vent Stop, when deployed, will limit sash travel to allow for ventilation

Tight mortise-cut, double-wall sill dam extends inside the jamb, eliminating the need to caulk an open seam.

Cam-Action Lock features durable zinc-cast design that pulls sashes and mechanical interlock tightly together to prevent air infiltration.

*4.3 times better than industry minimum. .30cfm **8" rain per hour (45% over industry minimum 33mph)
 (Test results vary by style and size of window. Size tested is 44" x 63" with SS glass.) Multi-lites are Silver tested

Windows Manufactured in the USA

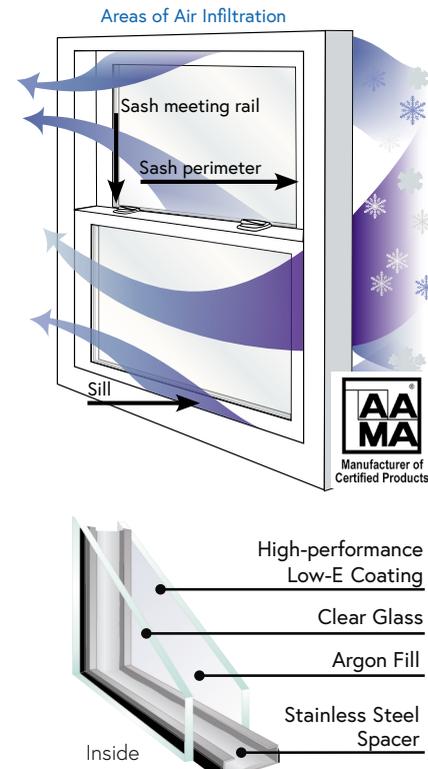

Barrington Windows are manufactured in the USA and are designed and engineered specifically for our challenging Midwest and East Coast climates. This weather is unlike any other in the country due to its hot humid summers and brutally cold and snowy winters. Why purchase a window made for the entire country's average weather when you can invest in one designed for your unique climate? Other benefits of products made in the USA include:

- No shipping costs
- Quicker turnaround
- Supports economy
- Windows specifically designed for our challenging climate
- Quicker service for parts

Air Infiltration

Poorly designed windows don't have built-in airlocks, weatherstripping, and the barriers necessary to keep air from forcing its way in. Leaky windows cause drafty homes. Barrington windows greatly minimize air leaks with numerous air barriers designed into our advanced sill design.

The Barrington window comes standard with one of our double-pane, high-performance Low-E glass systems with a stainless steel spacer, which will help to dramatically improve the efficiency of your new windows.

Sliders come in 2- and 3-lite models. 3-Lite Sliders have a center fixed panel and are available in configurations of 1/3-1/3-1/3 and 1/4-1/2-1/4 .

Casements have a unique hinged design that allows for easy cleaning from the inside of your home.

Kingsroyal patio doors are built strong, including a heavy-duty metal reinforcement and an extruded aluminum screen door frame, while still remaining aesthetically appealing.

Providing Affordable Structural Integrity and Pleasing Aesthetics

- World-class robotic assembly**
 Consistent fabrication quality from window to window. Fusion-welded sashes and frame are built squarely. Narrow manufacturing tolerances produce a tight window that best prevents air and water infiltration
- Dura-Sill™ engineered sloped sill**
 Tight mortise-cut, double-wall sill dam extends inside the jamb, eliminating the need to caulk open seam.
- Foam-Tite® compression seal** with straddle gasket is a closed-cell neoprene weatherseal that secures the sill and sash to prevent air and water infiltration.
- Dual-fin wool-pile weatherstripping**
 Protects around the perimeter of all sashes to fight air infiltration.
- Full-metal reinforcement**
 Lock screws are fastened into metal for secure hold.
- Integral ergonomic lift rails**
 Comfortable, ergonomic design and is significantly stronger and more durable than snap-in lift rails.
- Balance covers**
 Give the window a more attractive and polished appearance.
- Interlock system**
 Interlock at sash meeting rails creates a super-tight seal against air infiltration, providing security, comfort and well being.
- Tilt-in sash system**
 Dual operating tilt-in sashes make cleaning safe and easy from inside the home.
- Vent latches**
 When deployed will limit sash travel, allowing for a secure way to keep windows open for ventilation.
- Certa-Force™ balance system**
 Certa-Force balance system provides smooth and easy operation of double-hung windows — and requires minimal maintenance or adjustment
- Cam-Action lock** features durable zinc-cast design that pulls sashes and interlock tightly together to reduce air infiltration.
- Extruded aluminum screen** frame features unobtrusive black screen mesh and matching black spline.
