

# OPERATOR'S MANUAL

# PZ10X-XXX-XXX-AXX

INCLUDING: OPERATION, INSTALLATION, SAFETY AND MAINTENANCE

RELEASED: 11-26-21

## 1" DIAPHRAGM PUMP

REVISED: 4-15-23

1:1 RATIO (METALLIC)

**READ THIS MANUAL CAREFULLY BEFORE INSTALLING,  
OPERATING OR SERVICING THIS EQUIPMENT.**

It is the responsibility of the employer to place this information in the hands of the operator. Keep for future reference.

### SERVICE KITS

Refer to Model Description Chart to match the pump material options.

**637397** for air section repair (see page 10).

**637401-XXX** for fluid section repair **with** seats (see page 8).

**637401-XX** for fluid section repair **without** seats (see page 8).

**NOTE:** This kit also contains several air motor seals which will need to be replaced.

**637395-X** major air valve assembly (see page 11).

### PUMP DATA

**Models** . . . . . see Model Description Chart for "-XXX".

**Pump Type** . . Air Operated Double Diaphragm

**Material** . . . . . see Model Description Chart.

#### Weight

PZ10A-XAX-XXX-AXX . . . . . 25.3 lbs (11.48 kgs)

PZ10A-XCX-XXX-AXX . . . . . 39.85 lbs (18.11 kgs)

PZ10A-ASX-XXX-AXX . . . . . 42.85 lbs (19.41 kgs)

PZ10A-BSX-XXX-AXX . . . . . 42.85 lbs (19.41 kgs)

PZ10A-FSX-XXX-AXX . . . . . 48.55 lbs (22.01 kgs)

Add 6.44 lbs (2.92 kg) for Stainless Steel air motor section

**Maximum Air Inlet Pressure** . . . . . 120 psig (8.3 bar)

#### Maximum Material

**Inlet Pressure** . . . . . 10 psig (0.69 bar)

**Maximum Outlet Pressure** . . . . . 120 psig (8.3 bar)

**Maximum Flow Rate** (flooded inlet) . . . . . 52.2 gpm (197.6 lpm)

**Displacement / Cycle @ 100 psig** . . . . . 0.232 gal. (0.88 lit.)

**Maximum Particle Size** . . . . . 1/8" dia. (3.3 mm)

#### Maximum Temperature Limits

##### (Diaphragm / Ball / Seat material)

E.P.R. / EPDM . . . . . -60° to 280°F (-51° to 138°C)

Hytrel® . . . . . -20° to 180°F (-29° to 82°C)

Nitrile . . . . . 10° to 180°F (-12° to 82°C)

Polypropylene . . . . . 32° to 175°F (0° to 79°C)

Santoprene® . . . . . -40° to 225°F (-40° to 107°C)

PTFE . . . . . 40° to 225°F (4° to 107°C)

Viton® . . . . . -40° to 350°F (-40° to 177°C)

**Dimensional Data** . . . . . see page 12

**Mounting Dimension** . . . . . 4" x 6.25"  
(101.6 mm x 158.8 mm)

**Noise Level@ 70 psig, 60 cpm** . . . . . 80.6 dB(A)<sup>①</sup>

① The pump sound pressure levels published here have been updated to an Equivalent Continuous Sound Level (LA<sub>eq</sub>) to meet the intent of ANSI S1.13-1971, CA-GI-PNEUROP S5.1 using four microphone locations.

# MODEL DESCRIPTION CHART

## Model Code Explanation

PZ10    X    -    X    X    X    -    X    X    X    -    A    X    X

**Center Body Material**

- A - Aluminum
- S - Stainless Steel

**Fluid Connection**

- A - 1 - 11-1/2 NPTF - 2
- B - 1 - 11 BSP
- F - 1" ANSI / DIN Flange (Raised Face)

**Fluid Caps & Manifold Material**

- A - Aluminum
- C - Cast Iron
- S - Stainless Steel

**Hardware Material**

- P - Plated Steel
- S - Stainless Steel

**Seat Material**

- A - Santoprene
- C - Hytrel
- E - Carbon Steel
- F - Aluminum
- G - Nitrile
- H - Hard 440 Stainless Steel
- S - 316 Stainless Steel

**Ball Material**

- A - Santoprene
- C - Hytrel
- G - Nitrile
- S - Stainless steel
- T - PTFE
- V - Viton

**Diaphragm Material**

- A - Santoprene
- C - Hytrel
- G - Nitrile
- L - Long Life PTFE
- M - Medical Grade Santoprene
- T - PTFE
- V - Viton

**Revision**

- A - Revision

**Specialty Code 1 (Blank if no Speciality Code)**

- 0 - Standard Valve Block

**Specialty Code 2 (Blank if no Speciality Code)**

- 0 - No Option

**NOTICE: All possible options are shown in the chart, however, certain combinations may not be recommended. Consult a representative or the factory if you have questions concerning availability.**

## OPERATING AND SAFETY PRECAUTIONS

READ, UNDERSTAND AND FOLLOW THIS INFORMATION TO AVOID INJURY AND PROPERTY DAMAGE.

All diaphragm pump models listed in the Declarations of Conformity 5 and 6 (located near the end of the manual) conform to the requirements of the EU "Machinery Directive," UK regulation "Supply of Machinery (Safety) Regulations" 2008 (SI 2008/1597), and can be used in potentially explosive atmosphere areas with Zone 0/20 inside and outside the pump, but ONLY when the special conditions listed below under the section "SPECIFIC CONDITIONS OF SAFE USE FOR EXPLOSIVE ATMOSPHERES" are followed. The definitions for "Potentially Explosive Atmospheres" varies by geographical region around the world, and is summarized in the section below.

You must read and follow the detailed explanation of these hazards and follow the appropriate instructions noted in this manual for safe installation and operation.

### SAFETY INFORMATION - EXPLANATION OF SAFETY SIGNAL WORDS:

**⚠ WARNING** WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

**⚠ CAUTION** CAUTION, used with the safety alert symbol, indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

**NOTICE** NOTICE is used to address practices not related to personal injury.

### SPECIFIC CONDITIONS OF SAFE USE FOR EXPLOSIVE ATMOSPHERES :

These pumps can be used in an area with Zone 0/20 inside and outside the pump.

**⚠ WARNING** Non-compliance with any of these special conditions could create an ignition source that may ignite any potentially explosive atmospheres.

**⚠ WARNING** POTENTIAL ELECTROSTATIC CHARGING HAZARD. Clean only with a damp cloth.

**⚠ WARNING** STATIC SPARK. Can cause explosion resulting in severe injury or death. Ground pump and pumping system.

- Sparks can ignite flammable material and vapors.
- The pumping system and object being sprayed must be grounded when it is pumping, flushing, recirculating or spraying flammable materials such as paints, solvents, lacquers, etc. or used in a location where surrounding atmosphere is conducive to spontaneous combustion. Ground the dispensing valve or device, containers, hoses and any object to which material is being pumped.
- Use the pump grounding lug provided on metallic pumps for connection of a ground wire to a good earth ground source. Use Aro Part No. 66885-1 Ground Kit or a suitable ground wire (10 AWG or thicker).
- Pumps that will operate in environments defined as "hazardous locations" or "Potentially Explosive Atmospheres" must only be installed, connected and set-up by qualified personnel with knowledge and understanding of protection classes, regulations and provisions for apparatus in hazardous areas, for the region where the pump will operate.

- Secure pump, connections and all contact points (feet must be bolted) and provide clearance around the pump to avoid vibration and generation of contact or static spark.
- Consult local building codes and electrical codes for specific grounding requirements.
- After grounding, periodically verify continuity of electrical path to ground. Test with an ohmmeter from each component (e.g., hoses, pump, clamps, container, spray gun, etc.) to ground to insure continuity. Ohmmeter should show 0.1 ohms or less.
- Submerge the outlet hose end, dispensing valve or device in the material being dispensed if possible. (Avoid free streaming of material being dispensed.)
- Use hoses incorporating a static wire or use groundable piping.
- Use a grounded exhaust hose between the pump and the muffler. (Refer to minimum size under Installation.)
- Use proper ventilation.
- Keep flammables away from heat, open flames and sparks.
- Keep containers closed when not in use.

**⚠ WARNING** FOR MODELS CONTAINING ALUMINUM ENCLOSURES. Pumps must be mounted in such a manner as to eliminate the risk of sparks caused by friction or impact.

- Protect pump from external damage.
- Regularly inspect coatings for damage and if damage occurs do not use in Zone 0/20.

**⚠ WARNING** EXPLOSION HAZARD. Models containing aluminum wetted parts cannot be used with 1,1,1-trichloroethane, methylene chloride or other halogenated hydrocarbon solvents which may react and explode.

**⚠ WARNING** EXPLOSION HAZARD: Ensure that the pump will not exceed a maximum temperature of 25° C (77° F) lower than the auto ignition-temperature of the fluid being pumped.

- Check pump motor section, fluid caps, manifolds and all wetted parts to assure compatibility before using with solvents of this type.

**⚠ WARNING** If elevated temperatures or inlet pressure levels are detected, shut the pump off and discontinue its use until it can be inspected and/or repaired.

- The following conditions apply if fluid temperature, air inlet temperature and air inlet pressure are not controlled within the process:
  - Sensors using for measuring the inlet air and fluid temperature and over pressure of inlet air must be connected to a monitoring and shutdown system which is sufficiently reliable and compliant with the requirements for ATEX Safety related devices as defined in Annex II Clause 1.5.1 of Directive 2014/34/EU (i.e. b2 (SIL2) as defined by EN ISO 80079-37cl 6.5).
  - Associated programmable electronic devices forming a part of ignition protection systems must be installed in a safe area or be suitably certified ATEX rated for the zone into which where are installed.
  - The ignition protection system, when installed, is to be subjected to functional and accuracy tests to ensure shutdown occurs if the limits specified by the manufacturer are exceeded.

- Trip points for the temperature and pressure monitoring system shall be set such that shutdown of the pump occurs if air inlet pressure exceeds 120 PSIG or if the air inlet or fluid temperature exceeds the limitation on page 5.

**⚠WARNING** Do not perform maintenance or repairs in an area where explosive atmospheres are present. Prior to maintenance, ensure unit is unplugged and fully de-energized.

**NOTICE** Only FML-2 grease should be employed for lubrication of moving part.

**⚠WARNING** **MAXIMUM SURFACE TEMPERATURE LIMITS.** Maximum temperatures are based on mechanical stress only. Certain chemicals will significantly reduce maximum safe operating temperature. Consult the chemical manufacturer for chemical compatibility and temperature limits.

- The actual surface temperature of the pumps depend on the running conditions of the pump, the materials of construction, the temperature of the fluid pumped, and the environmental conditions.

- For ambient, process fluid and air inlet temperature see the temperature table on page 5.
- Ensure proper housekeeping to eliminate dust build-up on the pump. Certain dusts may ignite at pump surface temperature limits, as noted on page 5.
- For use in Explosive Gas Atmospheres the TEMPERATURE range rating is limited by the materials & seals used in the construction per possible product configuration. Material temperature limitations are provided and must not be exceeded in the application. The pumps follow ISO 80079-36:2016: Ex h IIC Ga.

- For use in Explosive Dust Atmospheres the TEMPERATURE range rating is limited by the materials & seals used in the construction per possible product configuration. Material temperature limitations are provided and must not be exceeded in the application. The pumps follow ISO 80079-36:2016: Ex h IIIC Da.

**⚠WARNING** Pump operation involves the risk of producing an electrostatic charge when flowing liquids. Medium and higher conductive fluids should be used as defined by EN IEC 60079-32-1:2018 Section 7.1.4. The minimum allowed fluid conductivity shall be as follows:

- 25 pS/m for fluids with dielectric constant less than 2.
- 50 pS/m for fluids with dielectric constant higher than 2.
- 100 pS/m for fluids with substantially higher dielectric constants than 2 or when it is unknown.

## TEMPERATURE LIMITS

The seat, ball and diaphragm materials for metallic pumps establish the ambient and pump temperature limitations. Use the temperature table below and the model code for ball, seat, diaphragm material to determine the temperature range for each pump model. Model code is explained in detail on page 2.

Example: PZ10X-XXX-AAA-AXX. AAA code is located in the first temperature range in the table below.

Result: -20°C to +40°C ambient temperature limit and -40°C to +78°C pump temperature limit.

Ambient Temperature Limits	Air Inlet and Process Fluid Temperature Limits	Ball, Seat, Diaphragm Model Code Letters Example: PZ10X-XXX-XXX-AXX

## GENERAL PRODUCT SAFETY INFORMATION:

**⚠️ WARNING EXCESSIVE AIR PRESSURE.** Can cause personal injury, pump damage or property damage.

- Do not exceed the maximum inlet air pressure as stated on the pump model plate.
- Be sure material hoses and other components are able to withstand fluid pressures developed by this pump. Check all hoses for damage or wear. Be certain dispensing device is clean and in proper working condition.

**⚠️ WARNING** Pump exhaust may contain contaminants. Can cause severe injury. Pipe exhaust away from work area and personnel.

- In the event of a diaphragm rupture, material can be forced out of the air exhaust muffler.
- Pipe the exhaust to a safe remote location when pumping hazardous or inflammable materials.
- Use a grounded 3/8" minimum ID hose between the pump and the muffler.

**⚠️ WARNING HAZARDOUS PRESSURE.** Can result in serious injury or property damage. Do not service or clean pump, hoses or dispensing valve while the system is pressurized.

- Disconnect air supply line and relieve pressure from the system by opening dispensing valve or device and / or carefully and slowly loosening and removing outlet hose or piping from pump.
- Obtain Material Safety Data Sheets on all materials from the supplier for proper handling instructions.

**⚠️ WARNING EXPLOSION HAZARD.** Models containing aluminum wetted parts cannot be used with 1,1,1-trichloroethane, methylene chloride or other halogenated hydrocarbon solvents which may react and explode.

- Check pump motor section, fluid caps, manifolds and all wetted parts to assure compatibility before using with solvents of this type.

---

## GENERAL DESCRIPTION

---

The ARO diaphragm pump offers high volume delivery even at low air pressure and a broad range of material compatibility options are available. Refer to the model and option chart. ARO pumps feature stall resistant design, modular air motor / fluid sections.

Air operated double diaphragm pumps utilize a pressure differential in the air chambers to alternately create suction and a positive fluid pressure in the fluid chambers, ball checks insure a positive flow of fluid.

Pump cycling will begin as air pressure is applied and will continue to pump and keep up with the demand. It will build and maintain line pressure and will stop cycling once maximum line pressure is reached (dispensing device closed) and will resume pumping as needed.

---

## AIR AND LUBE REQUIREMENTS

---

**⚠️ WARNING EXCESSIVE AIR PRESSURE.** Can cause personal injury, pump damage or property damage. Do not exceed maximum inlet air pressure as stated on air motor plate.

- Filtered and oiled air will allow the pump to operate more efficiently and yield a longer life to operating parts and mechanisms.

**⚠️ WARNING MISAPPLICATION HAZARD.** Do not use models containing aluminum wetted parts with food products for human consumption. Plated parts can contain trace amounts of lead.

**⚠️ CAUTION** Verify the chemical compatibility of the pump wetted parts and the substance being pumped, flushed or recirculated. Chemical compatibility may change with temperature and concentration of the chemical(s) within the substances being pumped, flushed or circulated. For specific fluid compatibility, consult the chemical manufacturer.

**⚠️ CAUTION** Be certain all operators of this equipment have been trained for safe working practices, understand it's limitations, and wear safety goggles / equipment when required.

**⚠️ CAUTION** Do not use the pump for the structural support of the piping system. Be certain the system components are properly supported to prevent stress on the pump parts.

- Suction and discharge connections should be flexible connections (such as hose), not rigid piped, and should be compatible with the substance being pumped.

**⚠️ CAUTION** Prevent unnecessary damage to the pump. Do not allow pump to operate when out of material for long periods of time.

- Dry running of the pump is acceptable provided that the cycles accumulated do not exceed the application specific maintenance interval.
- Disconnect air line from pump when system sits idle for long periods of time.

**⚠️ CAUTION** Use only genuine ARO replacement parts to assure compatible pressure rating and longest service life.

**NOTICE** Replacement warning labels are available upon request: "Static Spark and Diaphragm Rupture" pn / 94080.

- A filter capable of filtering out particles larger than 50 microns should be used on the air supply. There is no lubrication required other than the "O" ring lubricant which is applied during assembly or repair.
- If lubricated air is present, make sure that it is compatible with the Nitrile "O" rings in the air motor section of the pump.

---

## TRANSPORT AND STORAGE

---

- Store in a dry place, do not remove product from box during storage.
- Do not remove protection caps from inlet and outlet prior to installation.
- Do not drop or damage box, handle with care.

---

## INSTALLATION

---

- Pump cycle rate and operating pressure should be controlled by using an air regulator on the air supply.
- The outlet material volume is governed not only by the air supply but also by the material supply available at the inlet. The material supply tubing should not be too small or restrictive. Be sure not to use hose which might collapse.
- Use flexible connections (such as hose), at the suction and discharge, these connections should not be rigid piped and must be compatible with the material being pumped.

- Pipe exhaust away to a safe location. Use a suitable diameter grounded hose between pump and muffler. Refer to table for proper size.

<b>Pump Series</b>	1"
<b>Hose Size (min ID)</b>	3/8"

- Install a ground wire where applicable.
- Verify correct model / configuration prior to installation.
- Pumps are tested in water at assembly. Flush pump with compatible fluid prior to installation.
- When the diaphragm pump is used in a forced-feed (flooded inlet) situation, it is recommended that a "Check Valve" be installed at the air inlet.
- Flooded suction inlet pressure must not exceed 10 psig (0.69 bar).
- Always flush the pump with a solvent compatible with the material being pumped if the material being pumped will solidify when not in use for a period of time.

## OPERATING INSTRUCTIONS

- Always flush the pump with a solvent compatible with the material being pumped if the material being pumped is subject to "setting up" when not in use for a period of time.
- Disconnect the air supply from the pump if it is to be inactive for a few hours.
- The outlet material volume is governed not only by the air supply, but also by the material supply available at the inlet. The material supply tubing should not be too small or restrictive. Be sure not to use hose which might collapse.
- When the diaphragm pump is used in a forced-feed (flooded inlet) situation, it is recommended that a "check valve" be installed at the air inlet.
- Secure the diaphragm pump legs to a suitable surface to insure against damage by vibration.

## MAINTENANCE

- Certain ARO "Smart Parts" are indicated which should be available for fast repair and reduction of down time.
- Provide a clean work surface to protect sensitive internal moving parts from contamination from dirt and foreign matter during service disassembly and reassembly.
- Keep good records of service activity and include the pump in preventive maintenance program.
- Service kits are available to service two separate diaphragm pump functions: 1. AIR SECTION 2. FLUID SECTION. The Fluid Section is divided further to match typical part Material Options.
- Before disassembling, empty captured material in the outlet manifold by turning the pump upside down to drain material from the pump.

## DIAPHRAGM PUMP SERVICE

### GENERAL SERVICE NOTES:

- Inspect and replace old parts with new parts as necessary. Look for deep scratches on metallic surfaces, and nicks or cuts in "O" rings.
- Tools needed to complete disassembly and repair:
  - 7/8" wrench, 1/2" socket or wrench, 3/8" socket or wrench, 3/8" Allen wrench, 10 mm Allen wrench, T-10 Torx screwdriver, torque wrench (measuring inch pounds), "O" ring pick.
- Keep good records of service activity and include pump in preventive maintenance program.
- USE ONLY GENUINE ARO REPLACEMENT PARTS TO ASSURE PERFORMANCE AND PRESSURE RATING.
- Repairs should be made only by authorized trained personnel. Contact your local authorized ARO Service Center for parts and customer service information.

Original instructions are in English. Other languages are a translation of the original instructions.

## PARTS AND SERVICE KITS

Refer to the part views and descriptions as provided on page 8 through 11 for parts identification and Service Kit information.

- Certain ARO "Smart Parts" are indicated which should be available for fast repair and reduction of down time.
- Service kits are divided to service two separate diaphragm pump functions: 1. AIR SECTION, 2. FLUID SECTION. The Fluid Section is divided further to match typical part Material Options.

## FLUID SECTION DISASSEMBLY

1. Remove (61) outlet manifold, (60) inlet manifold.
2. Remove (22) balls, (19 and 33) "O" rings and (21) seats.
3. Remove (15) fluid caps.

**NOTE:** Only PTFE diaphragm models use a primary diaphragm (7) and a backup diaphragm (8). Refer to the auxiliary view in the Fluid Section illustration.

4. Remove the (14) screw, (6) diaphragm washer, (7) or (7 / 8) diaphragms and (5) backup washer.

**NOTE:** Do not scratch or mar the surface of (1) diaphragm rod.

## FLUID SECTION REASSEMBLY

- Reassemble in reverse order. Refer to the torque requirements on page 9.
- Clean and inspect all parts. Replace worn or damaged parts with new parts as required.
- Lubricate (1) diaphragm rod and (144) "U" cup with Lubriplate FML-2 grease (94276 grease packet is included in service kit).
- Be certain the diaphragm assembly bottoms out on the (1) rod, back off PTFE diaphragm assembly far enough to align holes.
- For models with PTFE diaphragms: Item (8) Santoprene diaphragm is installed with the side marked "AIR SIDE" towards the pump center body. Install the PTFE diaphragm (7) with the side marked "FLUID SIDE" towards the (15) fluid cap.
- Check torque settings after pump has been re-started and run a while.

## PARTS LIST / PZ10X-XXX-XXX-AXX FLUID SECTION

### Fluid Section Service Kits (637401-XXX OR 637401-XX):

#### ★ For Fluid Kits With Seats :

**637401-XXX Fluid Section Service Kits include:** Seats (see SEAT Option, refer to -XXX in chart below), Balls (see BALL Option, refer to -XXX in chart below), Diaphragms (see DIAPHRAGM Option, refer to -XXX in chart below), and items 19, 33, 70, 144, 175 and 180 (listed below) plus 174 and 94276 Lubriplate FML-2 grease (page 10).

#### ★ For Fluid Kits Without Seats:

**637401-XX Fluid Section Service Kits include:** Balls (see BALL Option, refer to -XX in chart below), Diaphragms (see DIAPHRAGM Option, refer to -XX in chart below), and items 19, 33, 70, 144, 175 and 180 (listed below) plus 174 and 94276 Lubriplate FML-2 grease (page 10).

## PARTS LIST / PZ10X-XXX-XXX-AXX FLUID SECTION

**Torque Sequence**

COLOR CODE		
Material	Diaphragm Color	Ball Color
Hytrel	Cream	Cream (+)
Nitrile	Black	Red (+)
Santoprene	Tan	Tan
Santoprene (Backup)	Green	N/A
PTFE	White	White
Viton	Yellow (-)	Yellow (-)
	(-) Dash	(+) Dot

**FOR THE AIR MOTOR SECTION SEE PAGES 10 AND 11**

**ASSEMBLY TORQUE REQUIREMENTS**  
**NOTE: DO NOT OVERTIGHTEN FASTENERS.**

(14) Screw, tighten to 25 - 30 ft lbs (33.9 - 40.7 Nm).  
 (26) Screws, 20 - 25 ft lbs (27.1 - 33.9 Nm).  
 (29) Nuts, 15 - 20 ft lbs (20.3 - 27.1 Nm).  
 (131) Screws, 12 - 17 ft lbs (16.3 - 23.0 Nm).

**LUBRICATION / SEALANTS**

① Apply Lubriplate FML-2 grease to all “O” rings, “U” Cups and mating parts.  
 ② Apply Loctite 242 to threads at assembly.  
 ③ Apply PTFE tape to threads at assembly.  
 ④ Apply Loctite 271 to threads at assembly.  
 ⑤ Apply anti-seize compound to threads and bolt and nut flange heads which contact pump case when using stainless steel fasteners.  
 ⑥ Not used with PZ10X-XXX-AXX, -CXX and -GXX

Note: Lubriplate FML-2 is a white food grade petroleum grease.

**Figure 2**

## PARTS LIST / PZ10X-XXX-XXX-AXX AIR SECTION

✓ Indicates parts included in 637397 Air Section Service Kit shown below and items (70), (144), (175) and (180) shown on page 8.

Item	Description (size)	Qty	Part No.	[Mtl]
101	Center Body (PZ10A)	(1)	97025	[A]
	(PZ10S)	(1)	97034	[SS]
103	Bushing	(1)	97391	[D]
105	Screw (M6 x 1 - 6g) (16 mm long)	(4)	95991	[SS]
111	Spool	(1)	95835	[D]
118	Actuator Pin	(2)	95999	[SS]
121	Sleeve	(2)	95123	[D]
126	Plug	(1)	Y17-13-S	[SS]
128	Pipe Plug (1/8 - 27 NPT x 0.27")	(1)	Y17-50-S	[SS]
✓132	Gasket	(1)	96170	[B]

	(1/4") (PZ10S)	(3)	Y14-416-T	[SS]
134	Screw (M6 x 1 - 6g x 20 mm)	(4)	95887	[SS]
135	Valve Block (PZ10A-X-X)	(1)	95942-3	[Z]
	(PZ10S-X-X)	(1)	95939-3	[SS]
136	End Cap (PZ10A)	(1)	95941	[Z]
	(PZ10S)	(1)	95938	[SS]
✓137	Gasket	(1)	95844	[B]
✓138	"U" Cup (3/16" x 1-5/8" OD)	(1)	Y186-53	[B]

### AIR MOTOR SECTION SERVICE

Service is divided into two parts – 1. Pilot Valve, 2. Major Valve. **GENERAL REASSEMBLY NOTES:**

- Air Motor Section Service is continued from Fluid Section repair.
- Inspect and replace old parts with new parts as necessary. Look for deep scratches on surfaces, and nicks or cuts in "O" rings.
- Take precautions to prevent cutting "O" rings upon installation.
- Lubricate "O" rings with Lubriplate FML-2 grease.
- Do not over-tighten fasteners, refer to torque specification block on view.
- Torque fasteners following restart.
- SERVICE TOOLS – To aid in the installation of (168) "O" rings onto the (167) pilot piston, use tool # 204130-T, available from ARO.

### PILOT VALVE DISASSEMBLY

1. A light tap on (118) should expose the opposite (121) sleeve, (167) pilot piston and other parts.
2. Remove (170) sleeve, inspect inner bore of sleeve for damage

### PILOT VALVE REASSEMBLY

1. Clean and lubricate parts not being replaced from service kit.
2. Install new (171 and 172) "O" rings, replace (170) sleeve.
3. Install new (168) "O" rings and (169) "U" cup. Note the lip direction. Lubricate and replace (167) pilot piston.
4. Reassemble remaining parts, replace (173 and 174) "O" rings.

Item	Description (size)	Qty	Part No.	[Mtl]
✓139	"U" Cup (3/16" x 1-1/8" OD)	(1)	Y186-49	[B]
140	Valve Insert	(1)	95838	[AO]
141	Valve Plate	(1)	95885	[AO]
✓166	Gasket	(1)	96171	[B]
✓167	Pilot Piston (includes 168 and 169)	(1)	67164	[D]
168	"O" Ring (3/32" x 5/8" OD)	(2)	94433	[U]
169	"U" Cup (1/8" x 7/8" OD)	(1)	Y240-9	[B]
170	Piston Sleeve	(1)	94081	[D]
✓171	"O" Ring (3/32" x 1-1/8" OD)	(1)	Y325-119	[B]
✓172	"O" Ring (1/16" x 1-1/8" OD)	(1)	Y325-22	[B]
✓173	"O" Ring (3/32" x 1-3/8" OD)	(2)	Y325-123	[B]
✓★174	"O" Ring (1/8" x 1/2" OD)	(2)	Y325-202	[B]
✓176	Diaphragm (check valve)	(2)	95845	[U]
181	Roll Pin (5/32" OD x 1/2" long)	(4)	Y178-52-S	[SS]
✓200	Gasket	(1)	96172	[B]
201	Muffler	(1)	350-568	
233	Adapter Plate	(1)	95832	[P]
★✓	Lubriplate FML-2 Grease	(1)	94276	
	Lubriplate Grease Packets (10)		637308	

★ Fluid Section Service Kit Parts, see page 8.

### MAJOR VALVE DISASSEMBLY

1. Remove (135) valve block and (233) adapter plate, exposing (132 and 166) gaskets and (176) check valve.
2. Insert a small flat blade screwdriver into the notch in the side of (135) valve block and push in on tab to remove (233) adapter plate, releasing (140) valve insert, (141) valve plate and (200) gasket.
3. Remove (136) end cap and (137) "O" ring, releasing (111) spool.

### MAJOR VALVE REASSEMBLY

1. Install new (138 and 139) "U" cups on (111) spool – **LIPS MUST FACE EACH OTHER.**
  2. Insert (111) spool into (135) valve block.
  3. Install (137) gasket on (136) end cap and assemble end cap to (135) valve block, securing (105) screws.
  4. Install (140) valve insert and (141) valve plate into (135) valve block.
- NOTE:** Assemble (140) valve insert with "dished" side toward (141) valve plate. Assemble (141) valve plate with part number identification toward (140) valve insert.
5. Assemble (200) gasket and (233) adapter plate to (135) valve block. **NOTE:** Assemble (233) adapter plate with notched side down.
  6. Assemble (132 and 166) gaskets and (176) check valve to (101) body.
  7. Assemble (135) valve block and components to (101) body, securing with (134) screws. **NOTE:** Tighten (134) screws to 35 - 40 in. lbs (4.0 - 4.5 Nm).

MATERIAL CODE	
[A]	= Aluminum
[AO]	= Alumina Oxide
[B]	= Nitrile
[C]	= Carbon Steel
[D]	= Acetal
[P]	= Polypropylene
[SS]	= Stainless Steel
[U]	= Polyurethane
[Z]	= Zinc

## PARTS LIST / PZ10X-XXX-XXX-AXX AIR SECTION

Figure 3

## TROUBLESHOOTING

### Product discharged from exhaust outlet.

- Check for diaphragm rupture.
- Check tightness of (14) diaphragm washer.

### Air bubbles in product discharge.

- Check connections of suction plumbing.
- Check O" rings between intake manifold and inlet side fluid caps.
- Check tightness of (14) diaphragm washer.

### Motor blows air or stalls.

- Check (176) check valve for damage or wear.
- Check for restrictions in valve / exhaust.

### Low output volume, erratic flow, or no flow.

- Check air supply.
- Check for plugged outlet hose.
- Check for kinked (restrictive) outlet material hose.
- Check for kinked (restrictive) or collapsed inlet material hose.
- Check for pump cavitation – suction pipe should be sized at least as large as the inlet thread diameter of the pump for proper flow if high viscosity fluids are being pumped. Suction hose must be a non-collapsing type, capable of pulling a high vacuum.
- Check all joints on the inlet manifolds and suction connections. These must be air tight.
- Inspect the pump for solid objects lodged in the diaphragm chamber or the seat area.

## DIMENSIONAL DATA

(Dimensions shown are for reference only, they are displayed in inches and millimeters (mm)).
