

Integrating the trusted Ingersoll Rand Pumps gear pump portfolio

More Pump Technologies One Trusted ARO Brand

The Ingersoll Rand Pumps gear pump portfolio is becoming part of ARO – bringing together proven pump technologies, broader application expertise and a stronger approach to industrial fluid handling.

A stronger fluid-handling portfolio

Industrial fluid-handling applications are rarely one-size-fits-all. Different processes require different pumping principles, materials, operating ranges and levels of application support. That is why the Ingersoll Rand Pumps portfolio is becoming part of ARO. By bringing these established pump technologies together under the ARO brand, customers gain access to a broader portfolio of fluid-handling solutions from one trusted organization.

The same proven products – More possibilities

The expanded ARO portfolio supports applications ranging from fluid transfer and material handling to lubrication, circulation, metering and demanding industrial processes. Together, the expanded portfolio helps customers and distribution partners select solutions based on the needs of the application – not the limitations of a single pump technology.

What is changing?

- The Ingersoll Rand Pumps portfolio is becoming part of ARO Pumps.
- Customers will benefit from a more unified experience and broader fluid-handling solutions.
- The expanded ARO offering brings together complementary pumping technologies under one trusted brand.

What is staying the same?

- Trusted product family names remain unchanged.
- Continued commitment to manufacturing excellence and customer support.
- The underlying technologies, quality and application expertise remain unchanged.
- Customers can continue to specify and operate the same trusted pump technologies.

A broader portfolio for more applications
