

Weather TIPS

Keeping your home safe
before a storm hits.

Earthquake

- 1 Install flexible gas and water pipe connections.**
Rigid gas and water pipe connections can break during an earthquake. Consider having a licensed contractor install flexible connections to help prevent breakage that may result in water or gas leaks.
- 2 Secure heavy furniture with flexible fasteners.**
Position heavy furniture away from beds, couches, desks or anywhere people sit or sleep.
- 3 Fasten TVs, water heaters and appliances to wall studs.**
To prevent them from falling, strap televisions, water heaters and other heavy appliances to wall studs.
- 4 Know where your utility shutoffs are.**
Pipes can break after an earthquake. Please contact your utility company if you do not know the location of your shutoffs.
