

Heated Blower Desiccant Air Dryers

High Performance. Maximum Reliability. Low Profile Design
500 - 14,900 m³/h

Energy Efficient Compressed Air Treatment

AHB Series

High quality in-house air treatment manufacturing

A modern production system and process demands increasing levels of air quality, and compressed air operators need to ensure that the downstream equipment also delivers on it 100%.

The new Air Treatment portfolio manufactured by CompAir utilising the latest technology provides an energy efficient solution at lowest life cycle costs. The same quality, performance, and efficiency standards delivered by the compressors can now be enjoyed from the Air Treatment range.

Investment in the design and manufacture of our product range, in addition to delivering a strong support structure, ensures that compressed air operators don't need to worry about the quality of their compressed air – quality that is key to ensuring maximum production efficiency and investment protection.

AHB-Series Heated Blower compressed air dryers - a dedicated solution for every application

By combining the proven benefits of desiccant drying with modern design, CompAir provides an extremely compact and reliable system to dry and clean compressed air efficiently.

At the heart of any compressed air treatment solution is the dryer, its purpose, to remove water vapour, stop condensation, corrosion and in the case of adsorption dryers, inhibit the growth of micro-organisms.

The CompAir AHB-Series of heated blower desiccant air dryers has proven to be the ideal solution for many thousands of compressed air users worldwide in a wide variety of industries.

Why choose desiccant dryer technology?

Compressed air purification must deliver uncompromising performance and reliability whilst providing the right balance of air quality with the lowest cost of operation. Desiccant dryers are the simplest type of compressed air dryer available and have long been the dryer of choice for many industries and applications. They are simple, reliable, and cost-effective solutions for small to medium flow systems, often the only viable technology available.

| Air Quality Recommended Standards | | |
|--|-------------|----------------------|
| High Quality Air Applications | [ISO Class] | [Pressure Dew Point] |
| Air bearings | 3 | -20°C |
| Instrument Air | 3 | -20°C |
| Sand blasting | 3 | -20°C |
| Air gauging | 2 | -40°C |
| Spray painting | 2 | -40°C |
| Chemical Process - Oxydation, Ammonia Production | 2 | -40°C |
| Conveying, powder products | 2 | -40°C |
| Fluidics, sensors | 2 | -40°C |
| Food & beverages, direct air contact | 2 | -40°C |

“Clean, dry air improves production efficiency and reduces maintenance costs and downtime. Desiccant dryers provide the highest levels of dry compressed air.

Applications and industries

CompAir's AHB-Series are used in a variety of industries where negative PDP is required and are suited to a range of ISO Class 3 and 2 applications in the manufacturing, packaging, textile, food & beverage, and transport industries, to name a few.

Automotive

Food & Beverage

Pharmaceutical

Chemical

Oil & Gas

Desiccant technology

Desiccant dryers work on the principle of moisture always migrating to the driest medium possible. Therefore, water vapour is removed from compressed air by passing it over an adsorbent desiccant material.

As the air contacts the adsorbent material, water vapour transfers from the wet air to the dry desiccant, however, adsorbent materials have a fixed adsorption capacity and once this capacity is reached, they must be regenerated or replaced. Therefore, to provide a continuous supply of clean, dry compressed air, adsorbent dryers utilise two chambers of desiccant material and at any one time, whilst one chamber is on-line, drying the incoming compressed air, the other is either off-line, being regenerated or is re-pressurised, ready to come on-line. All desiccant dryers remove water in this manner.

The energy consumed by a desiccant dryer can be directly attributed to the method used to regenerate the adsorbent material.

Low Profile for Easy Maintenance

CompAir desiccant dryers are like no others. Our low profile design provides easy access to key maintenance points at operator level for faster servicing and less downtime. The lower silhouette also allows upright shipment and facilitates simpler installation.

With manifolds angled toward the centre at operator level, the high performance valves are easily accessed for maintenance. For example, a typical diaphragm valve in a heatless dryer can be rebuilt in less than ten minutes, without removing the valve from the manifold.

- Angled manifolds make valves easy to access and maintain
- Heavy Duty Filters

Innovative Controls and Design Lower Energy Costs

- Our new dryers offer the state-of-the-art Energy Management System (EMS) that maximises energy efficiency while maintaining a constant dew point. By using a humidity sensor to continuously monitor the dew point, EMS minimises the compressed air used in regeneration, and optimises heater and blower operation
- Our heated blowers are equipped with solid state soft starters that limit inrush current to ensure a smooth start and longer blower motor life
- The dryers are engineered for low pressure drop through valve selection, tower size and filter design
- The heater and blower are controlled by the outlet regeneration temperature that shuts off to save electrical power once desiccant has been thoroughly regenerated
- Solid state relays provide precise heater control, reduced heating times and extended heater life

A heated blower dryer with EMS can save you over €20,000 in just 3 years!

These calculations are approximations based on the following assumptions: Heatless Model IR D3300IL, Heated model AHB533TLS, 55 m³/min, 1,800 CFM, 400 kW Compressor Motor, 0.07 per kW/hr 80 hours per week, and 40 weeks per year.

“State-of-the-art Energy Management System (EMS) maximises energy efficiency while maintaining a constant dew point.

State-of-the-art Microprocessor Controller

- Maintains dryer performance at optimum levels, constantly monitors functions and provides maintenance alerts and protection notification, minimising downtime
- Matches the dryer control to the load/unload state of the air compressor
- Modbus compatible
- 7" LCD display for easy viewing

Heavy Duty Filters For Longevity

- Standard heavy duty after-filters extend desiccant life and provide maximum particle protection of the downstream air.

What Makes CompAir Heated Blower Desiccant Dryers Better?

CompAir desiccant dryers are designed to virtually eliminate costly production interruptions due to moisture. All of our heated blower dryers use twin desiccant towers and strategically positioned valves for drying compressed air.

Switching valves are normally open, while purge valves are normally closed to allow air flow through the dryer in case of power loss.

Strategically-placed filters that remove oil and contaminants ensure only clean, dried air exits the dryer. Every dryer features an IP54 package, providing increased protection of electrical components, controls and displays. Heated blower dryers have several standard features to ensure high quality operation as well as options to customise dryers to fit the needs of your air system.

Heated blower dryers have a higher initial investment, but with no or little diversion of compressed air from the system for regeneration, they offer significantly lower operating costs.

Heated Blowers – The Process...

Drying

From the air compressor, the moist air enters the dryer through a pre-filter that removes contaminants and protect the desiccant. The air is directed through the drying tower. The adsorbent material removes the moisture from the air through adsorption. The dry air passes through an after-filter removing any contaminate particles before entering into the air system. The adsorption process ends when the dew point reaches the target.

Regeneration

While the drying process takes place in one tower, the other one takes care of regenerating the adsorbent material. Ambient air enters through the blower intake. Air temperature is elevated as air moves across the heater and is then directed to the regenerating tower. Hot air flows in from bottom to top through the regenerating tower, removing the adsorbed moisture from the desiccant. Moist air exits the dryer through an exhaust port equipped with a silencing muffler to reduce noise.

“Heated blower dryers have several standard features to ensure high quality operation as well as options to customise dryers to fit the needs of your air system.

Cooling down

At the end of the regeneration, the heater is turned off and the blower cools down the heater and positively influence the temperature in the regeneration tower.

After that, the blower impeller rotates in the opposite direction to cool the regeneration tower even more effectively and bring the adsorbent material to a lower temperature for the new cycle.

Parallel flow

Finally, to contribute even more effectively to the outlet temperature, the two towers deliver air simultaneously, arriving at the optimal working situation.

After this, the cycle is reversed: the tower that previously regenerated now absorbs the humidity and vice versa.

Heated Blower Features – Your Benefits

Desiccant Dryer Features

1. Microprocessor Controller

Controls valve switching to correctly direct air flow and operation of blowers and heaters. Protects the dryer via continuously monitoring operating parameters.

2. Environmental Protection

IP54 rating provides protection against dust and moisture contamination (IP65 option for wash down applications).

3. Motor Protection/Soft Starter

Reduces inrush current and stress on the mechanical system.

4. Power Supply

Dryers operate at 50 Hz (all models) or 60 Hz (optional).

5. Centrifugal Blower

High performance centrifugal blower enables the use of ambient air for regeneration, eliminating compressed air loss.

6. High Performance Heater

Heats the air used for regeneration to increase the efficiency of moisture removal.

7. Desiccant

Reliable high strength non-acidic desiccant provides maximum performance and is easily stored and handled.

“CompAir desiccant dryers are like no others. Our low profile design provides easy access to key maintenance points at operator level for faster servicing and less downtime.

iConn

8. Silencing Exhaust

Reduce the exhausted air noise level to ensure a worker-friendly environment.

9. High Performance Valves

High performance butterfly valves with self-energised sealing provide quick response and long life. The valves are centrally angled for easy access.

10. Filters

Pre-filter: High efficiency removing oil aerosol content down to $.01 \text{ mg/m}^3$ @ 21°C protecting and extending the life of the desiccant.

After-filter: Heavy duty removing particles down to 1 micron insuring high air quality downstream to the customer.

11. Safety Relief Valve

Protects the dryer from over pressurisation incase of fire.

12. Desiccant Towers

The towers are rated for continuous 10 bar g operation. The digital controller turns the towers off and on for regeneration regulation.

13. Humidity Sensor

The sensor is part of the EMS package that allows continuous monitoring of the dew point.

Superior Reliability – Lower Capital Investment

Features are your benefits

High Air Quality: Delivers ISO Class 2 or Class 1 pressure dew point air for critical applications; high efficiency pre and post-filters provide constant high air quality, protecting downstream air from contamination.

Superior Reliability: Proven electronic control performance indicators, extruded aluminium with anodisation and epoxy painting, and NEMA 3 / IP54 Protection (also suitable for outdoor installation) make desiccant dryers durable and high-strength.

Total Cost of Investment: Reduced cost of ownership with point of use design to treat only the required air, conservative pressure drop 0.2 bar g, and purge reduction on compressed air demand (on/off-load).

Ease of Use: User-friendly electronic interface with alarm indicators available for models 40 and above.

Serviceability: Modular dryers feature an optimised design for simplified maintenance and preventative maintenance alerts.

Remote controlled: iConn ready, to be updated on the status and behaviour of the dryers even when you are not close to it.

Advantages at a glance:

- **Robust and reliable** – industry-proven design
- **Suitable for all industries and applications** – some desiccant dryer regeneration methods prevent their use in certain industries/applications
- **Lower capital investment** – and reduced complexity compared to other dryer regeneration methods

iConn Industry 4.0 solution

iConn is the smart, proactive real-time monitoring service that delivers in-depth and real-time knowledge on the system to compressed air users.

- ✓ Advanced remote analysis
- ✓ Predictive – evaluates historic data
- ✓ Maximises energy efficiency
- ✓ Optimises compressor performance

- ✓ Reduces downtime
- ✓ Works as an open standard
- ✓ Free on new compressors – can be retrofitted
- ✓ Proactive maintenance

“Desiccant dryers are the simplest type of compressed air dryer available and have long been the dryer of choice for many industries and applications. They are a simple, reliable, and cost-effective solution.

The CompAir Assure Service and Warranty agreements

Cover the airend for up to 10 years.

Technical Data

| Model | Connection Size | Capacity | | Weight [kg] | Dimensions [mm] | | |

* Performances refer to air suction of FAD 20°C (68°F), 1 bar (14.5 psig), and the following operating conditions: 7 bar (100 psig) working pressure, -20°C (-4°F) pressure dewpoint, 25°C (77°F) ambient temperature, 35°C (95°F) compressed air inlet temperature.

Innovation & Engineering Excellence

A leading global manufacturer of a wide range of world-class compressed air solutions, CompAir is dedicated to providing a complete solution for our industry partners. From the latest advances in oil-free and oil-lubricated technologies to a complete range of downstream equipment, air treatment and accessories.

An extensive network of dedicated CompAir sales companies and premium partners across all continents provide global expertise with a truly local service, ensuring our advanced technology is backed up with the right support.

CompAir has consistently been at the forefront of compressed air systems development, culminating in some of the most energy efficient and low environmental impact compressors on the market today, helping customers achieve or surpass their sustainability targets.

CompAir compressed air product range

Advanced Compressor Technology Lubricated

- Rotary Screw
 - > Fixed and Regulated Speed
- Portable

Oil-Free

- Water Injected Screw
 - > Fixed and Regulated Speed
- Two Stage Screw
 - > Fixed and Regulated Speed
- Rotary Scroll
- Ultima®

Complete Air Treatment Range

- Filter
- Refrigerant and Desiccant Dryer
- Condensate Management
- Heat of Compression Dryer
- Nitrogen Generator

Modern Control Systems

- CompAir DELCOS Controllers
- SmartAir Master Plus Sequencer
- iConn - Smart Compressor Service

CompAir policy is one of continuous improvement and we therefore reserve the right to alter specifications and prices without prior notice. All products are sold subject to the Company's conditions of sale.

Value Added Services

- Professional Air Audit
- Performance Reporting
- Leak Detection

Leading Customer Support

- Custom Engineered Solutions
- Local Service Centres
- Genuine CompAir Parts and Lubricants
