

Inventory management checklist

Keeping your seller-fulfilled inventory up to date ensures that your item never goes out of stock and remains available for purchase on Walmart.com. Use this handy checklist to make sure your items always are in stock.

Update inventory frequently

We recommend making accurate, timely **inventory updates** in line with your acknowledgement of orders and rate of sale. This helps ensure correct inventory counts are displayed on Walmart.com and helps you avoid overselling. You don't need to update inventory for your entire catalog in each feed, only items where the count has changed.

Acknowledge all orders

Walmart keeps track of your open orders and subtracts them from what's displayed on Walmart.com to prevent overselling. Failure to **acknowledge orders** can cause your item to have a lower count on Walmart.com, which could result in overselling. For more information, see [Acknowledge orders in Seller Center](#).

Monitor cross-platform inventory

Sometimes, issues arise if you share the same inventory across multiple marketplaces and don't make updates accordingly. Consider automating inventory via API to provide consistent inventory updates to Walmart to keep accurate counts on Walmart.com.

Evaluate inventory insights

Use **Success Hub** insights to proactively replenish seller-fulfilled inventory for out-of-stock items and high-demand SKUs that are forecasted to run out of stock within 30 days.
