

SRP VIRTUAL COMMISSIONING PROGRAM

SAVE ENERGY AND MONEY

The SRP Virtual Commissioning Program (VCx) helps businesses implement energy efficiency measures that could help save up to 15% on energy bills.

HOW IT WORKS

No on-site visits

Everything will be conducted virtually, and all communications will be done through email or by phone.

Data analysis

Our team uses your SRP smart meter data to determine when and how your electricity is being used.

Customized recommendations

Based on our findings and your priorities, a trained Energy Adviser will provide a list of no- and low-cost measures that can help your business save energy and money.

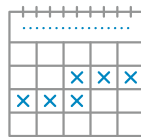

Review results

Your Energy Adviser will verify the impact of your energy-saving adjustments and go over the results with you. They will also discuss additional ways you can save money.

EXAMPLES OF ENERGY-SAVING MEASURES

Optimizing equipment schedules
based on occupancy

Managing equipment startup and
shutdown schedules

Identifying equipment setbacks to
reduce excess consumption
